CLAIMS:

All claims currently pending and under consideration in the referenced application are shown below. No claim amendments have been proposed herein. This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (Previously Presented) A system comprising:
- a markup language core engine for providing categories of behaviors including layout and rendering behaviors:
- at least one external component designed to provide categories of external component behaviors including at least one of an external component layout behavior and an external component rendering behavior in addition to the behaviors provided by the core engine;
- a pair of interfaces associated with each external component for communication between the external component and the core engine; and
- a mechanism included in the core engine to extend a selected category of behavior of the core engine with the behaviors of a same category of the at least one external component, such that the behaviors of the same category of the at least one external component participate with the behaviors of the core engine, wherein the mechanism and the at least one external component communicate through the pair of interfaces to confirm participation, and participation includes the at least one external component delegating some processing of the behaviors of the same category to the core engine.

Appl. No. 09/677,403 Amdt. Dated August 9, 2006

Resp. to Office Action of June 12, 2006

2. (Previously Presented) The system of claim 1, wherein first interface of each pair

is exposed by the external component for querying by the mechanism, and a second interface of

each pair is exposed by the mechanism for querying by the external component.

3. (Original) The system of claim 1, wherein the behaviors provided by one of the at

least one external component override comparable behaviors of the core engine.

4. (Original) The system of claim 1, wherein the behaviors provided by one of the at

least one external component complement comparable behaviors of the core engine.

5. (Original) The system of claim 1, wherein the behaviors provided by one of the at

least one external component are attached behaviors that can be applied and subsequently

removed

6. (Original) The system of claim 1, wherein the behaviors provided by one of the at

least one external component are element behaviors that are permanently applied.

7. (Previously Presented) A method performed by a mechanism for extending a

behavior of a core engine with a behavior of an external component, both the core engine

behavior and the external component behavior belonging to a same category of behavior, the

category being one of a layout behavior and a rendering behavior, the method comprising:

calling a behavior initialization method of the external component to determine how the

behavior of the external component participates with the behavior of the core engine, wherein the

core engine behavior and the external component behavior belong to the same category of

behavior and participation includes supplementing core engine behavior with external

component behavior, wherein supplementing includes the at least one external component 3

131774v2

Resp. to Office Action of June 12, 2006

delegating some processing of the core engine behavior and the external component behavior,

belonging to the same category of behavior, to the core engine in one mode, and participation

includes replacing core engine behavior with external component behavior in another mode;

calling a behavior method of the external component for the external component to

provide the behavior of the external component when the core engine is providing the behavior

of the core engine, so that the behavior of the external component participates with the behavior

of the core engine; and,

receiving a call to a corresponding behavior method of the mechanism for the external

component to communicate with the core engine during participation of the behavior of the

external component with the behavior of the core engine.

8. (Original) The method of claim 7, wherein the mechanism is part of the core

engine.

9. (Previously Presented) The method of claim 7, wherein the behavior is a layout

behavior.

10. (Original) The method of claim 9, wherein the behavior is fully delegated to the

external component from the core engine, which is specified by the external component in

response to calling the behavior initialization method of the external component.

11. (Previously Presented) The method of claim 9, wherein the behavior

implemented by the external component is called after a comparable behavior of the core engine

is performed, which is specified by the external component in response to calling the behavior

initialization method of the external component.

4

131774v2

Appl. No. 09/677,403 Amdt. Dated August 9, 2006

Resp. to Office Action of June 12, 2006

12. (Previously Presented) The method of claim 7, wherein the behavior is a

rendering behavior.

13. (Original) The method of claim 12, wherein rendering by the behavior of the

external component replaces rendering by the comparable behavior of the core engine, which is

specified by the external component in response to calling the behavior initialization method of

the external component.

14. (Original) The method of claim 12, wherein rendering by the behavior of the

external component intersperses with rendering by the comparable behavior of the core engine,

which is specified by the external component in response to calling the behavior initialization

method of the external component.

15. (Original) The method of claim 7, further initially comprising calling a query

method of the external component implementing the behavior.

16 (Original) The method of claim 7, wherein the method is performed by execution

of a computer program from a computer-readable medium by a processor.

Claims 17-27 (Cancelled)

28. (Previously Presented) A computer-readable medium having one or more

computer programs stored thereon for execution by a processor comprising:

a markup language core engine for providing categories of behaviors including layout

and rendering behaviors;

5

131774v2

Appl. No. 09/677,403 Amdt. Dated August 9, 2006

Resp. to Office Action of June 12, 2006

at least one external component designed to provide categories of external component

behaviors including at least one of an external component layout behavior and an external

component rendering behavior in addition to the behaviors provided by the core engine;

a pair of interfaces associated with each external component for communication between

the external component and the core engine; and

a mechanism included in the core engine to extend a selected category of behavior of the

core engine with the behaviors of a same category of the at least one external component, such

that the behaviors of the same category of the at least one external component participate with

the behaviors of the core engine, wherein the mechanism and the external component

communicate through the pair of interfaces, and participation includes the at least one external

component delegating some processing of the behaviors of the same category to the core engine.

29. (Previously Presented) The computer-readable medium of claim 28, wherein a

first interface of each pair is exposed by the external component for querying by the mechanism,

and a second interface of each pair is exposed by the mechanism for querying by the external

component.

Claims 30-32 (Canceled)
